

Fire safety policy

At Modul, no harm to people, property, or the environment shall occur as a result of fire. To achieve this goal, we work systematically with our fire safety measures. We shall all have the knowledge needed to prevent fires and to act safely in the event of a fire.

We strive for a high standard in both technical equipment and the competence level of our employees.

We aim to achieve this by having:

- A well-documented and well-communicated fire safety organization
- Fire safety procedures integrated into daily operations
- Instructions for self-inspections
- Evacuation strategies in the form of evacuation plans, training plans, and drills
- Control systems where fire safety is an integral part of overall safety work
- Follow-up procedures

All employees at Modul shall:

- Work preventively to improve safety
- Be familiar with evacuation routes
- Participate in drills and be informed of procedures and documentation relating to preventive measures
- Report deviations and incidents
