

## Environmental policy

Applicable environmental legislation and other regulations are considered minimum requirements for Modul, and our goal is to exceed these.

We prioritize suppliers who can contribute to our journey towards reducing our environmental footprint.

We ensure that employees have sufficient knowledge to meet the environmental requirements associated with their individual tasks. We achieve this by informing and engaging staff in environmental matters.

We also conduct our operations in a way that does not compromise the safety and health of our employees.

We work actively with our environmental aspects, which leads to continuous improvement and development of our environmental efforts.
